Problem 02

by Antonio Bernardini

1 Requirements to implement

Write a program in `C` language capable of performing the 4 operations between two real numbers entered from the keyboard. After the two numbers, called A and B, have been entered, the program must display the four values $A + B$, $A - B$, $A \cdot B$ and $\frac{A}{B}$. Assume that $B \neq 0$.

2 Solution

A possible solution is reported in the `main.c` file.
